SXC

WHITEPAPER

A Cashback-Driven Utility Token for the Adult Industry

Version 1.1 | September 2026
sexcoin.it

This document is for informational purposes only and does not constitute financial, legal, or investment advice. Please read the full Disclaimer section before making any decisions related to SexCoin (SXC).

As of September 25, 2026: the SXC/ETH liquidity pool is live on Uniswap, the initial liquidity position is locked on-chain until March 23, 2027, and the Cashback Pool allocation has been moved to a dedicated wallet. See Section 6 for full detail and verifiable addresses.

1. Introduction

SexCoin (SXC) is a utility token built on Ethereum, designed to power a cashback and loyalty ecosystem exclusively for the adult industry — including adult content platforms, strip clubs, and sexy shops. The goal is simple: turn everyday spending within adult-industry venues and platforms into a reusable form of value that customers can spend again across the same network of affiliated partners.

The adult industry is one of the largest consumer markets in the world, yet it remains underserved by mainstream loyalty and rewards infrastructure due to conventional financial institutions' reluctance to engage with the sector. SexCoin aims to fill this gap using blockchain technology, offering a transparent, bankless rewards mechanism that partners can adopt without relying on traditional payment processors for the loyalty layer itself.

2. Vision & Mission

Vision: to become the reference loyalty currency of the global adult industry, recognized and accepted across a growing network of affiliated platforms and venues.

Mission: to give adult-industry businesses a simple, transparent cashback tool that increases customer retention, and to give customers a tangible, spendable reward for their loyalty — without relying on centralized financial intermediaries that often restrict this sector.

3. The Problem

- Adult-industry businesses are frequently de-risked or denied service by banks, payment processors, and loyalty platforms.
- Customers of adult platforms and venues have no unified, cross-platform loyalty system.
- Existing loyalty points are typically locked within a single business, with no real transferability or market value.

4. The SexCoin Solution

- A single, transparent token (SXC) usable as a cashback reward across every affiliated partner.
- A blockchain-based ledger that removes dependency on traditional banking rails for the loyalty layer.
- A reusable balance: tokens earned at one partner can be redeemed at any other partner within the network.
- A publicly verifiable smart contract with no hidden administrative functions (no mint, no pause, no blacklist).

5. Token Overview

Token Name	SexCoin
Ticker	SXC
Standard	ERC-20 (Ethereum)
Contract Address	0x7eB4dB01000a472d4FD744b72Be24e391Cdd0dC8
Max Total Supply	1,000,000,000 SXC (fixed, no minting)
Contract Status	Deployed and publicly verified on Etherscan
Administrative Functions	None (no mint, no pause, no blacklist, no privileged owner)

The SXC smart contract intentionally implements only the standard ERC-20 interface (transfer, transferFrom, approve, allowance, balanceOf) with no additional administrative privileges, in order to guarantee that supply and holder balances cannot be altered unilaterally after deployment.

6. Tokenomics & On-Chain Status

Total supply is fixed at 1,000,000,000 SXC, allocated as follows:

Allocation	%	Tokens (SXC)	Status
Liquidity Pool	10%	~99,997,370	Live on Uniswap, position locked until 23 Mar 2027
Cashback Pool	35%	350,000,000	Moved to a dedicated wallet
Founder & Dev Reserve	45%	450,000,000	Held by the founding wallet; dedicated wallet pending
Partner Incentives	10%	100,000,000	Being moved to a dedicated wallet
Total	100%	1,000,000,000	

On-chain addresses (verifiable on Etherscan)

Purpose	Address
SXC token contract	0x7eB4dB01000a472d4FD744b72Be24e391Cdd0dC8
Liquidity lock contract (NFTTimelock)	0xCdCAAdca9F860858c98e778e26C66e2EbB8428b09
Cashback Pool wallet	0x3994A6e09Faaf33c7f7c4F28acb64f606F0Ec0c3
Partner Incentives wallet	In progress — to be published once complete
Founder & Dev Reserve wallet	In progress — to be published once complete

The liquidity lock contract holds the Uniswap v4 liquidity position (a non-fungible token representing the SXC/ETH pool position) and releases it to the beneficiary address only after the unlock date. Its source

can be read directly on Etherscan; the contract exposes a public `timeRemaining()` function so anyone can verify how long the position stays locked without trusting any third-party statement.

The founder reserve is not yet separated into its own wallet at the time of writing. Until that step is completed, the corresponding 450,000,000 SXC remain in the same wallet that originally deployed the contract and created the liquidity pool. This document will be updated with the dedicated address once the transfer is complete.

7. Cashback Mechanism

Customers who spend at a SexCoin-affiliated partner receive SXC as a cashback reward. These tokens can later be redeemed as a form of voucher at any other partner within the network, creating a closed-loop circular economy across adult-industry businesses.

7.1 Initial Cashback Rate

In its initial phase, SexCoin applies a simple fixed rate: **1 SXC for every 1 EUR spent** at an affiliated partner. Given the token's initial market price — determined by a small opening liquidity pool — this represents a marginal real-world cashback percentage, allowing the ecosystem to bootstrap sustainably.

7.2 Rate Transition Policy

As SXC's market value evolves, the fixed 1:1 rate will be replaced by a percentage-based model to keep the cashback sustainable for both partners and the project. The following thresholds guide this transition:

SXC Market Price	Effective Cashback	Action
Up to 0.01 EUR	Up to 1%	Maintain fixed rate: 1 SXC per 1 EUR spent
0.01 – 0.05 EUR	1% – 5%	Monitor and prepare transition
Above 0.05–0.10 EUR	Above 5–10%	Switch to a fixed percentage model (e.g. 5% of total spend, paid in SXC at market rate)

This transition policy is defined in advance and will be communicated publicly, so that partners and customers are never surprised by a change to the cashback structure.

7.3 Redemption

In its earliest phase, redemption is handled manually or semi-manually: customers present proof of an SXC balance and spend it at a participating partner, who then forwards the redeemed tokens back into circulation for future rewards. Automated, integrated redemption (e.g. via a merchant app or point-of-sale integration) is planned as the network of partners and transaction volume grow — see the Roadmap in Section 10.

8. Ecosystem & Partner Network

SexCoin's partner network is intentionally limited to the adult industry, including:

- Adult content subscription platforms
- Strip clubs and adult entertainment venues
- Sexy shops and adult retail

This focus is a deliberate design choice: keeping the ecosystem within a single, well-defined industry vertical rather than an unrelated mix of businesses. Onboarding of new partners will prioritize venues and platforms with an established, verifiable presence in this sector. As of this version, no partner has

yet been onboarded; the Partner Incentives allocation is reserved for this purpose.

9. Liquidity & Market

The SXC/ETH liquidity pool is live on Uniswap (v4, 0.9% fee tier), paired with approximately 0.205 ETH against ~99,997,370 SXC at inception. The resulting liquidity position was minted as a non-fungible token and, on the same day, transferred into a purpose-built lock contract (NFTTimeLock, address 0xCdCAAdca9F860858c98e778e26C66e2EbB8428b09) that prevents any withdrawal — by the founding team or anyone else — before March 23, 2027.

Because the project is self-funded with limited initial capital, the opening liquidity pool is modest by design. Consequently, SXC's early market price is highly sensitive to trading volume. The team intends to grow liquidity over time as the ecosystem and partner network expand, and to extend the lock (via the contract's extendLock function, which can only lengthen, never shorten, the lock period) as that growth materializes.

10. Roadmap

Phase 1 — Foundation (complete)

Smart contract deployment and verification. Website, team presentation, and initial documentation published.

Phase 2 — Market Launch (complete)

SXC/ETH liquidity pool opened on Uniswap. Liquidity position locked on-chain via a dedicated timelock contract until March 23, 2027.

Phase 3 — Treasury Separation (in progress)

Cashback Pool allocation moved to its own wallet (complete). Partner Incentives and Founder & Dev Reserve allocations being moved to dedicated wallets.

Phase 4 — First Partners

Onboarding of the first adult-industry partners. Manual/semi-manual cashback distribution to validate the model.

Phase 5 — Regulatory Alignment

Legal review of the cashback mechanism under applicable payment services regulation, in parallel with technical development.

Phase 6 — Ecosystem Growth

Expansion of the partner network. Introduction of the percentage-based cashback model as defined in Section 7.2, if price thresholds are reached.

Phase 7 — Automation

Development of tools for automated cashback distribution and redemption at partner locations.

11. Team

Giuseppe Quero	Founder & CEO	Leading the vision, strategy and development of the project
Massimo Macaru	Technical Manager and Administrator	Responsible for blockchain infrastructure, smart contracts and security.

12. Regulatory Considerations

A cashback system in which customers earn and later redeem a token with market value across multiple affiliated businesses may fall under EU rules governing limited-network payment instruments (PSD2, Art. 3(k)) and, potentially, the Markets in Crypto-Assets Regulation (MiCA), depending on the token's classification and use as a means of exchange. Restricting the partner network to a single industry vertical (adult entertainment) is intended to support — but does not automatically guarantee — eligibility for the limited-network exclusion.

The project is committed to obtaining a formal legal opinion from qualified fintech/banking law counsel before onboarding real partners or distributing cashback publicly, and to comply with any applicable notification requirements (e.g. to the relevant national central bank) should the exclusion apply. No partner has been onboarded and no cashback has been distributed to any customer as of this version of the document.

13. Risk Factors

- **Regulatory risk:** the cashback model's legal classification may require adjustments or authorization before public launch.
- **Market risk:** SXC's price may be highly volatile, particularly during the early stage with limited liquidity.
- **Concentration risk:** a significant share of the supply (currently the Founder & Dev Reserve, 45%) is held by the founding wallet and is not yet time-locked.
- **Adoption risk:** the ecosystem's value depends on onboarding a sufficient number of active partners.
- **De-risking risk:** banks, payment processors, and some centralized exchanges may restrict services related to the adult industry.
- **Smart contract risk:** the liquidity lock contract is custom-written for this project and has not undergone a third-party security audit; it has been tested on a public testnet prior to mainnet deployment.
- **Taxation:** cashback received in SXC may constitute taxable income for recipients, subject to local tax law.

14. Disclaimer

This whitepaper is for informational purposes only and does not constitute financial, legal, tax, or investment advice, nor an offer or solicitation to buy or sell any security or financial instrument. SexCoin (SXC) is a utility token

intended for use within the SexCoin ecosystem and should not be treated as an investment. Cryptocurrency markets are volatile and involve significant risk, including the potential loss of the entire amount invested. Prospective partners, holders, and users should conduct their own research and consult independent legal, tax, and financial advisors before engaging with SexCoin or its ecosystem. Nothing in this document should be construed as a guarantee of future performance, adoption, or regulatory outcome. All addresses and figures in this document are accurate as of the version date shown on the cover and are independently verifiable on Etherscan.
